21st Century Global Solutions - Australia

21st Century Global Solutions Limited is an Australian owned company developing products for global distribution. We have an Industrial Chemist on board with over 15 years of expertise in the antimicrobial industry. Our products are currently being used in Australia, the United States of America and Asia. Developing solutions for bacterial, biological and microbial problems is our main focus. Our Chemist's successes to date include the decontamination, restoration and protection of mould affected buildings and artefacts, development of antimicrobial surface coatings and development of a decontaminant used in the neutralisation of weapons grade Anthrax in biological warfare, tested and funded by the US Government.

NEWS

21st Century Global Solutions Ltd announces the availability of GSC2000 also known as Decon-Shield. This product is EPA listed for use as a commercial decontaminant and has been thoroughly tested. In addition to organisms including weapons grade anthrax, and all other single celled organisms such as Golden Staph, Klebsiella, fungi, viruses, bacterial spores and toxins etc, we have new tests against C.Diff spores that show a 99.999% reduction in 30 seconds. It is important to note that because of its mechanical action that kills micro-organisms, they cannot mutate into resistant forms of the biocide, even after prolonged use of the biocide. It is equally as important to point out that environmentally it is safe to use, non-flammable and chemically stable. It contains no heavy metals or pesticides. Further information may be found by clicking on the "Scientific" tab.

GSC2000 or Decon-Shield - available only through 21st Century Global Solutions Ltd

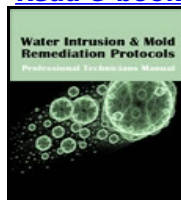

This product is proprietary to our industrial chemist Mr Robert Goldsworthy and is available **only** by contacting us direct through any of the methods listed on the "Contact Us" tab of this website.
